Louis Stokes Health Sciences Library

- Opened in 2001 and named after the Honorable Louis Stokes
- Civil Rights pioneer
- First African American Congressman from Ohio
- Dedicated to combating disparities in health care
Overview

The library is located at 501 W. Street, NW Washington, DC

The library offers **seating for 600**, including study carrels with club chairs, throughout the LSHSL in traditional and non-traditional settings.

There are **19 group- and single-study rooms** in total: **11 small study rooms** each have a table and 4 chairs; **8 Problem Based Learning rooms** are furnished with a table, and seats 10. A white board is mounted in each of these rooms.

Wireless connection, power and data ports

On-Campus or remote access

**Summer Hours**
- Monday – Friday: 8am – 10pm
- Saturday: 10am – 5pm
- Sunday: Closed

**Regular Hours**
- Monday – Thursday: 8 a.m. - 12 a.m.
- Friday: 8 a.m. – 10 p.m.
- Saturday: 10 a.m. - 10 p.m.
- Sunday: 12 noon - 12 a.m.
Louis Stokes Health Sciences Library (hsl.howard.edu)

- Access to 6,556 electronic journals
- 250+ are dentistry related
- 4,541 eBooks
- 61 fee-based databases.
- Electronic catalog
- A-Z list of databases
- E-Journals tab search or browse by first letter
- Research guides

Reserve and Reference materials are available behind the Access Services desk on the 1st Floor.

Updates also available on library’s Facebook & Twitter pages

Library Services

Include, but not limited to:

• **Library Resources Orientation**: Overview of library services, space and resources (room reservations, digital library, etc.)
• **Introductory and Advanced Training** in PubMed and other databases and resources
• **Evidence-Based Medicine**: Clinical Research; Literature Reviews; Systematic Reviews; and Complementary and Alternative Medicine
• **Research strategies and Grant Support**: Abstract writing, Poster creation, Literature review for grant application and publication of manuscripts
• **Scholarly communication support**: Research and Publication assistance, journal selection, open source and predatory publisher guidance
• **Citation Management Tools (RefWorks)** – saving citations and using them to write and cite and build bibliographies
• **Consultation on Intellectual Property**: Copyright, Trademarks & Patents

How does this work?
Primo provides simple, one-stop searching for books and e-books, videos, articles, digital media, and more.
Primo also helps you manage your research. Sign-in in order to:
- Renew books and videos
- Create favoriets lists
- Export citations to Refworks and Endnote Web
- View full search results. (Some databases, only show results when you’re signed in.)

Where can I get help?
Ask a librarian how to start your search

Questions? Comments?
Let us know what you think!

This service is provided in partnership with the Washington Research Library Consortium
Using Filters

- Filters are the easiest way to narrow your search
- Click **Show additional filters** for more options
- Click **Free full text** and **Full text** to limit to Howard's holdings.
- Filter for Dentistry Journals
Systematic review and recommendations for nonodontogenic toothache.
Yatani H¹, Komiyama O, Matsumoto Y, Watanabe K, Murakia W, Ikawa M, Sakamoto F, Tani A, Hara CO

Abstract
Nonodontogenic toothache is a painful condition that occurs in the absence of a clinically evident cause in the oral structures.

The purpose of this review is to improve the accuracy of diagnosis and the quality of dental treatment regarding these conditions. Electronic databases were searched to gather scientific evidence regarding related primary disorders and the role of nonodontogenic toothache. We evaluated the level of available evidence in scientific literature. There are a number of nonodontogenic toothache and they should be treated. Nonodontogenic toothache can be categorized into five primary disorders as follows: 1) myofascial pain referred to tooth/teeth, 2) neuropathic toothache, 3) idiopathic toothache, 4) sinus pain referred to tooth/teeth, 5) cardiac pain referred to tooth/teeth, 6) psychogenic toothache, and 7) toothache caused by various other disorders. We concluded that unnecessary dental treatment should be avoided.

Avulsed tooth

**Key Points**
- Avulsed tooth occurs when the tooth is completely displaced from the alveolar socket.
- Diagnosis is made through clinical and radiographic evidence.
- Treatment depends on the length of time the tooth has been outside its socket; replantation within 60 minutes is optimal; procedures vary depending on the time and status of the tooth.
- A dentist or someone trained in emergency dental procedures should prepare the involved area and splint the tooth.
- Hydration is vital to successful replantation.
- Follow-up begins with monthly clinical and radiographic monitoring of the replanted tooth; the schedule gradually extends to yearly.

**Pitfalls**
- Transportation of the tooth in an unsuitable medium.
- Replanting the tooth without knowing how long it has been outside its socket.
- Not recognizing trauma to other parts of the mouth, head, or neck.

**Urgent Action**
- Hydration to maintain viability of the periosteal ligament cells is crucial.
- Optimal transportation and treatment to replace the tooth back into the socket immediately.
- If field replantation is not possible, transport either inside the mouth between cheeks and lips or in Hank's balanced salt solution, in a glass of milk, or in a glass of cold milk.
- Use of the correct hydrating medium is key to maintaining tooth viability.

**Clinical Pearls:**
- Avoid hyperextending the neck, closing the mouth, or pushing too forcefully on the submandibular tissues.

**Jaw-Thrust Maneuver**

*See Figure 7.*

Figure 7 Jaw-thrust maneuver to open the airway. (From Espanol A, et al: Pediatric Emergency Medicine, 3rd ed, Philadelphia, Saunders, 2007, Figure 9-3.)

- When properly performed, this maneuver opens the airway with limited movement of the neck and therefore is the procedure to be used if there is concern about possible cervical spine injury.

**Treatment overview**

- Admit to intensive care unit if organ failure (ACG Strong recommendation, Low-quality evidence)
- Provide aggressive hydration (such as lactated Ringer’s solution 250-500 mL/hour) (ACG Strong recommendation, Moderate-quality evidence): adequate fluid resuscitation should maintain urine output ≥0.5 mL/kg/hour without renal failure

**Dosing & Indications**

- Adult Dosing
  - Alcohol withdrawal syndrome: initial, 10 mg IM or IV; may give 5 to 10 mg in 3 to 4 hr if necessary
  - Alcohol withdrawal syndrome: initial, 10 mg ORALLY 3 to 4 times in first 24 hr; then 5 mg ORALLY 3 to 4 times daily as needed
  - Anxiety: 2 to 10 mg
